# About Oberon

## SAFETY – a family tradition since 1978

Oberon was founded in 1978 by Jack Hirschmann to offer a personal protection line of products. It began with the creation of the innovative Face-Fit® face shield. This design ushered in the idea that face shields could be made to protect the user from specific and unique hazards. Later, Oberon was approached by NASA to create a solution to the blinding effects of UV radiation during early space walks. Preliminary tests demonstrated goggles would be too bulky to be worn inside helmets, so a thin layer of gold was applied to the astronaut's visors. This technology gave rise to Oberon's "Gold Shield" and was found to be useful in space, but also provided solutions for radiant heat hazards in the workplace commonly found in foundries and steel mills.

In 1985, Oberon invented the first Arc Flash face shield. The idea started with a phone call from an electric utility, which had experienced arc flash burns on their meter installers. The utility needed a way to protect their workers while allowing them to perform common electrical work tasks. Oberon answered the call and eventually created the first arc flash suit. The idea has now grown into an industry providing comprehensive safety for electricians, linemen and contractors across utilities, industry and municipalities around the world. Over the last 30 years Oberon has continued to learn about the electrical safety business and the need for solutions in many different places around the world. With the implementation of rules and regulations like NFPA 70E and CSZ Z462 related to safety in the workplace, Oberon has sought to develop a comprehensive offering that would adhere to these guidelines and protect workers while performing common work tasks.

The innovation continues today with invention of our True Color Grey (TCG™) Arc Flash Face Shields. With Oberon's TCG™ nearly clear face shield design the user can now see all the colors of the wires they are working on. This unique design solved an age old problem for electrical workers and also created a new industry standard that has raised the bar for all manufacturers in the industry today.

Oberon is not just a manufacturing company, we are an engineering company that develops innovative electrical safety solutions. We participate on many national standards committees and have a team of experts who strive every day to improve our Arc Flash PPE product line. At Oberon it is our mission to protect the welfare of the individual while adding value to a company's overall safety program.

# Electrical Safety Standards

Oberon is actively involved in the Standards development process as participating members on several technical committees. All of Oberon's products have been manufactured in accordance with every applicable Standard. Not only does Oberon help write these Standards, we lead by example in our research, product development, laboratory testing and manufacturing processes.

## NFPA 70E and CSA Z462 Standards

The National Fire Protection Association and the Canadian Standards Association address the required elements of corporate electrical safety program, including training, engineering controls, work methods, and ultimately the personal protective apparel as the last line of defense for worker safety.

## ANSI Standards

The American National Standards Institute oversees the development of voluntary consensus standards for products, services, processes, systems, and personnel.

## ASTM Standards

The American Society of Testing and Materials (ASTM) F18 Committee has developed standards covering the manufacturing, testing, care and use of arc flash PPE. Oberon's products have been certified using the most current version of every applicable ASTM testing standard and are in compliance with the overarching performance standard, ASTM F1506.

**ANSI Z87.1** addresses the design and performance characteristics of eye and face protective devices such as arc flash face shields.

**ANSI Z89.1** covers the performance, selection, care and use head protective devices such as hard caps and hard hats.

**ASTM D120** addresses manufacturing and testing of rubber electrical insulating gloves from worker protection from electrical shocks.

**ASTM F2178** is the test method developed to determine the protective characteristics of arc flash face shields and hoods against the thermal energy of an electric arc.

**ASTM F696** is the standard that covers leather protectors used in conjunction with rubber electrical gloves.

**ASTM F1959** is the test method developed to determine the protective characteristics of knit and woven material against the thermal energy of an electric arc.

**ASTM F1506** covers the design characteristics of garments and the knit and woven materials of which they are constructed.

**ASTM F2676** is the test standard used to evaluate the design and protective characteristics of arc suppression blankets against the thermal and concussive energy of an electric arc.

# Sizing Guide

**Worker Body Measurement:** The workers actual measurements determined using a fabric measuring tape.

**Coat, Bib-Overall and Coverall Measurements:** Garment dimensions are larger than the User's measurements to allow space for movement.

## Measuring Instructions

### 1. Use a Fabric Measuring Tape

**Chest:** Measure around the chest just under the arms and across the shoulder blades.

**Waist:** Measure around the natural waistline.

**Height:** Measure the total height of the worker. You can tape one measuring tape to a wall and have the worker stand up straight against it.

### 2. Select the Size

After measuring the worker select the size using the tables below. Each of these numbers represent the maximum measurement per size. Always round up and use the larger of either Chest or Waist.

### 3. Select the Height

All suits are sold as a Regular size. Order bib-overalls for adjustable height. Short, Tall and Extra Tall sizes are custom Made to Order. Regular Standard size is 5'10" to 6'1". Workers under 5'8" or over 6'4" need custom sizes.

## Glove Sizing

### Measuring Instructions

1. Measure around the hand at the fullest part.
2. Measure from the tip of the middle finger to the base of the hand.
3. Use the LARGEST of these two measurements for the correct size glove.
4. The number of inches/centimeters measured equals the size of the glove.

## What is True Color Grey?

Our patented TCG® Technology has finally solved the biggest issue electricians face when wearing appropriate Arc Flash protection. Historically, they have always experienced color distortion when looking through their protective shields.

What is True Color Grey? It is a medium density filter that allows all visible light to pass through without causing any color distortion. The end result is a nearly clear experience for the worker when performing electrical tasks. With the advent of this new technology electrical workers will no longer struggle to see colored wires or electrical tape while working energized.

# HRC2™ Series Arc Flash Kit

## Features

- Oberon's arc flash kit includes a True Color Grey arc flash face shield with hard cap, fire resistant treated cotton coveralls, balaclava, and a nylon storage bag.
- Nearly clear grey window provides 100% true color acuity and includes an anti-scratch resistant coating.
- Meets and exceeds NFPA 70E PPE Category 2 standards and has an arc rating of 8 cal/cm<sup>2</sup>.
- Available with optional shield mounted light for increased visibility when working in dark spaces.

# Rubber Electrical Gloves

## What protection do Rubber Insulating Gloves provide?

Rubber Insulating Gloves are designed and constructed to act as a barrier between the user and the energy/voltage, to insulate the user from electric shock. The ASTM D120 standard outlines the protection that the glove provides. The rubber gloves are thicker as their protection increases. The rubber gloves will provide protection against either Alternating Current (AC) as well as Direct Current (DC), up to the levels detailed in the standard as well as typically on the labeling, which is required to be affixed to each glove. It is important NOT to exceed the USE voltage detailed to avoid injury.

Rubber Glove Class	Maximum Use Volts AC	Maximum Use Volts DC

## Glove Sizing

### Measuring Instructions

1. Measure around the hand at the fullest part.
2. Measure from the tip of the middle finger to the base of the hand.
3. Use the LARGEST of these two measurements for the correct size glove.
4. The number of inches/centimeters measured equals the size of the glove.
